Paulo Henrique Cuchi

Senior Software Engineer

paulo@cuchi.me | cuchi.me | github.com/cuchi | linkedin.com/in/pcuchi
Joinville, Brazil · UTC-3 · Remote · Portuguese (native) · English (fluent, C2)

Summary

Senior software engineer with 10+ years building and maintaining production systems across backend, frontend and infrastructure, including technical leadership of small teams. Owns problems end to end — migrating critical systems with zero downtime, reducing infrastructure spend, and taking products from zero to first customers. Works primarily in Ruby, Python, TypeScript and Rust.

Experience

Sr. Software Engineer — Trusted Health
Jan 2022 – Jun 2026 · 4y 5m

- Moved compensation logic out of Airtable — a brittle third-party service holding a critical part of the product — into native Ruby on Rails code, improving stakeholder visibility and long-term maintainability.
- On the infrastructure team, built Ruby / Thor CLI tools adopted by 50+ engineers to stand up demo and testing environments on demand.
- Reduced CI/CD, observability and AWS infrastructure spend by ~30% (GitHub Actions, CircleCI, New Relic, Sentry, Mezmo).
- Migrated 4 services — including 2 large monoliths — from Heroku to AWS EKS with zero downtime, and built tooling to make deploying and debugging Kubernetes pods easier (Kubernetes, ArgoCD, Helm, Terraform, Ruby).
- Delivered supplier onboarding and third-party service integrations for a business-facing product, unblocking a client that accounted for ~80% of that product's revenue.

Sr. Software Engineer — Magrathea Labs
Mar 2020 – Jan 2022 · 1y 10m

- Worked on a data intensive web application that collects and displays reports for animal production corporations. The main technologies used were Python, Django, PostgreSQL, Redis, ElasticSearch and Angular.
- Led a team of 4 engineers on a forked subset of the product, owning the technical decisions on how it would scale for the client and running regular follow-ups with international stakeholders.
- Provided technical mentorship to employees on the projects we had in common.
- Worked on an internal project of the company that employees used to make appointments managed by HR. The stack of this project was Node.Js, TypeScript, React and PostgreSQL.

Software Engineer — NG Informática — TOTVS Software Partner
May 2016 – Mar 2020 · 3y 10m

- Worked on the development of an Android application for asset maintenance execution & management.
- Worked on an experimental web application for notifications & alerts written in Node.Js & MongoDB.
- Back-end tech lead for a SaaS application built from scratch before its first customers (Node.js, TypeScript, GraphQL, PostgreSQL); it was later extended to serve many clients in partnership with TOTVS.
- Worked on the research of new tools and methods to improve the DevOps cycle of the organization's SaaS products.

Software Engineer — ContaAzul
Oct 2015 – Mar 2016 · 5m

- Worked on a web service for accounting routines & integration using Java EE 7, Hibernate, JBoss & PostgreSQL.

Technical Support — UDESC
Jul 2012 – Jul 2013 · 1y

- Worked on the maintenance of a high-traffic website using HTML, JS, PHP & MySQL.

Skills & Technologies

Languages	Python · TypeScript / JavaScript · Ruby · Rust · Go · Java · SQL
Backend	Rails · Django · Flask · Node.js · Axum · GraphQL
Data	PostgreSQL · MySQL · MongoDB · Redis · ElasticSearch
Frontend	React · Svelte · Angular · HTML / CSS
Infrastructure	AWS · Kubernetes · Terraform · Helm · ArgoCD · GitHub Actions · CircleCI
Practices	Testing & code review · Technical leadership & mentorship · Unix tooling

Open Source

Changes merged upstream into projects maintained by others

ramda — JavaScript · github.com/ramda/ramda/pull/2581
Rewrote difference, without and intersection to drop their time complexity from O(n²) to O(n) using the internal _Set, with before/after benchmarks; merged upstream across two PRs (#2581, #2603).

TypeORM — TypeScript · github.com/typeorm/typeorm/pull/5178
Fixed parameter collisions in SelectQueryBuilder by namespacing internal query parameters, and improved the Repository.save() return type to cover generated columns; both merged (#5178, #2796).

DefinitelyTyped — TypeScript · github.com/DefinitelyTyped/DefinitelyTyped/pull/40254
Restored the missing | undefined on the R.head and R.last return types for the ramda definitions, lost in an earlier refactor; merged (#40254).

django-extensions — Python · github.com/django-extensions/django-extensions/pull/1529
Added an option to syncdata that removes extraneous objects before upserting, covering fixtures that break on unique constraints; merged (#1529). Also diagnosed a path where syncdata failed silently and reported success (#1527).

Repositories I own and maintain

jinja2-action — Python · 47 stars · github.com/cuchi/jinja2-action
GitHub Action that renders files with the Jinja2 template engine, published on the GitHub Marketplace — 44 public forks, used in third-party CI pipelines.

deepsave — Rust · github.com/cuchi/deepsave
Self-hosted personal finance manager: imports bank transactions via open banking (Pluggy) and categorizes them with DeepSeek, learning from every correction. Rust, React and PostgreSQL.

sobrou-nada-pro-bet — Rust · Apache 2.0 · github.com/cuchi/sobrou-nada-pro-bet
Full-stack cashless betting app in production: Rust (Axum, SQLx) backend, React + TypeScript frontend, PostgreSQL. Built by directing an AI coding agent and reviewing every change it produced.

Selected Writing

Go vs Rust: Writing a CLI tool — cuchi.me/posts/go-vs-rust/
Hands-on comparison of the same CLI tool built in both languages, covering error handling, compile times, memory usage and CI.

I Vibe-coded a Full-Stack App for $2.96 — cuchi.me/posts/vibe-coding/
Shipping a production Rust + React application by directing an AI coding agent, and an honest account of where it fell short.

Education

Systems Analysis and Development — UDESC
2016 – 2018

Computer Science (transferred) — UDESC
2012 – 2016

Web Development — SENAI
2010 – 2012
